multiqc

A modular tool to aggregate results from bioinformatics analyses across many samples into a single report.

Report generated on 2026-10-14, 12:02 BST based on data in: `/home/rishika/NGS_MTB/Qc/fastqc_raw`

General Statistics

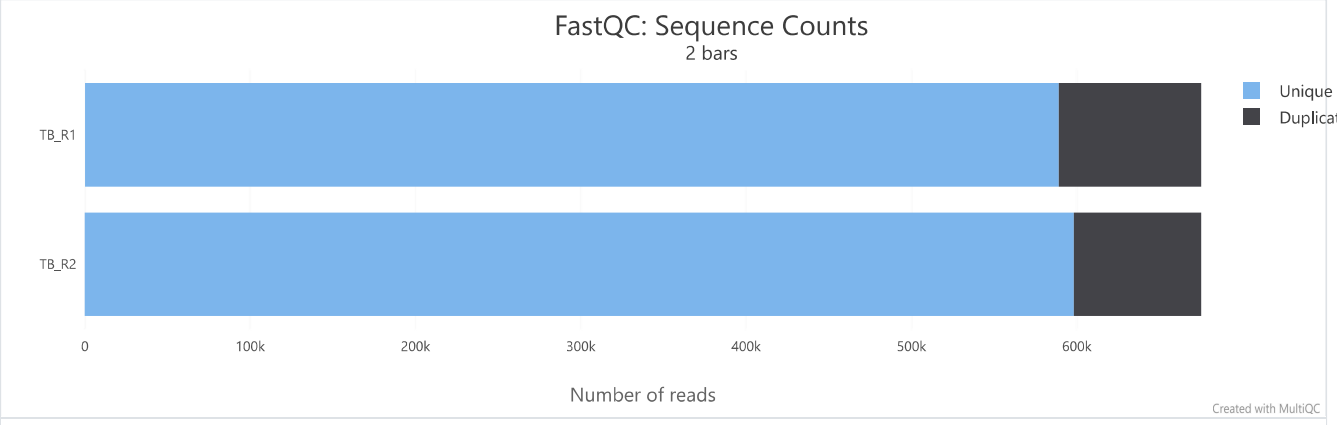

Sample Name	Dups	GC	Seqs
TB_R1	12.8 %	59.0 %	0.7 M
TB_R2	11.4 %	63.0 %	0.7 M

FastQC *Version:* `0.12.1`

Quality control tool for high throughput sequencing data. http://www.bioinformatics.babraham.ac.uk/projects/fastqc

Sequence Counts

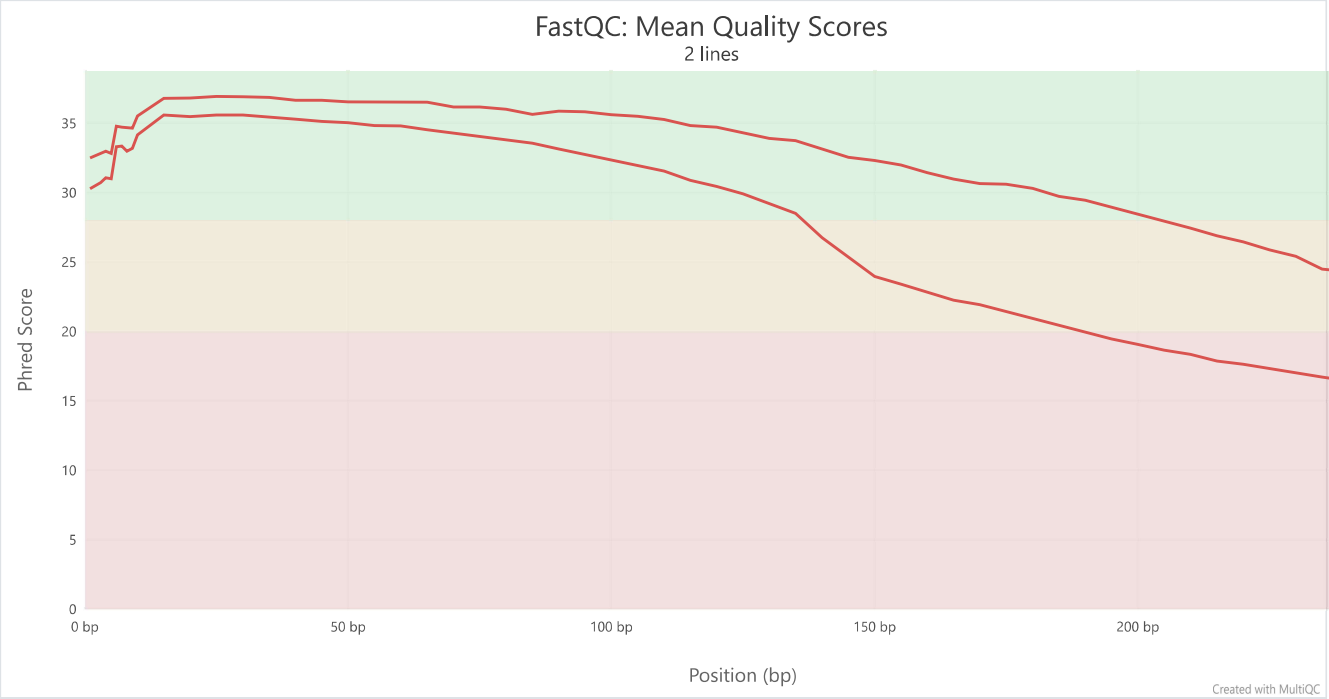

Sequence counts for each sample. Duplicate read counts are an estimate only.

View as a violin plot

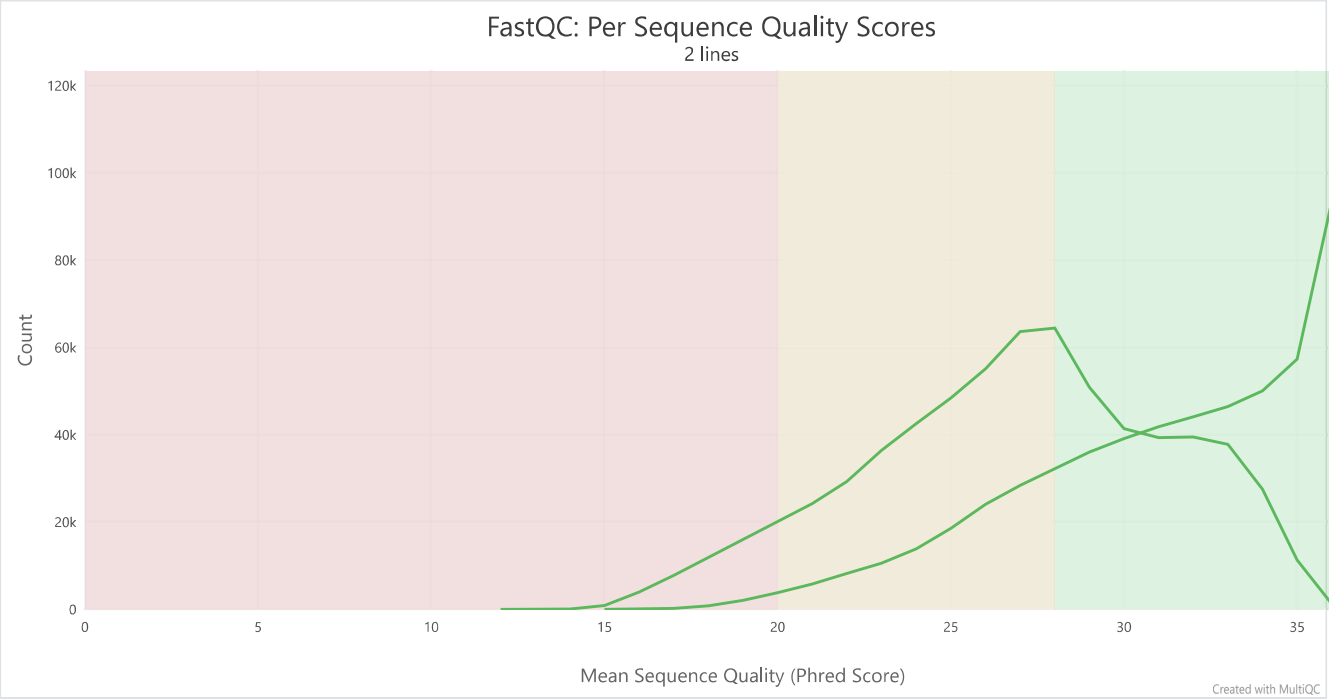

Sequence Quality Histograms

The mean quality value across each base position in the read.

Per Sequence Quality Scores

The number of reads with average quality scores. Shows if a subset of reads has poor quality.

Per Base Sequence Content

The proportion of each base position for which each of the four normal DNA bases has been called.

$ Click a sample row to see a line plot for that dataset.

Rollover for sample name

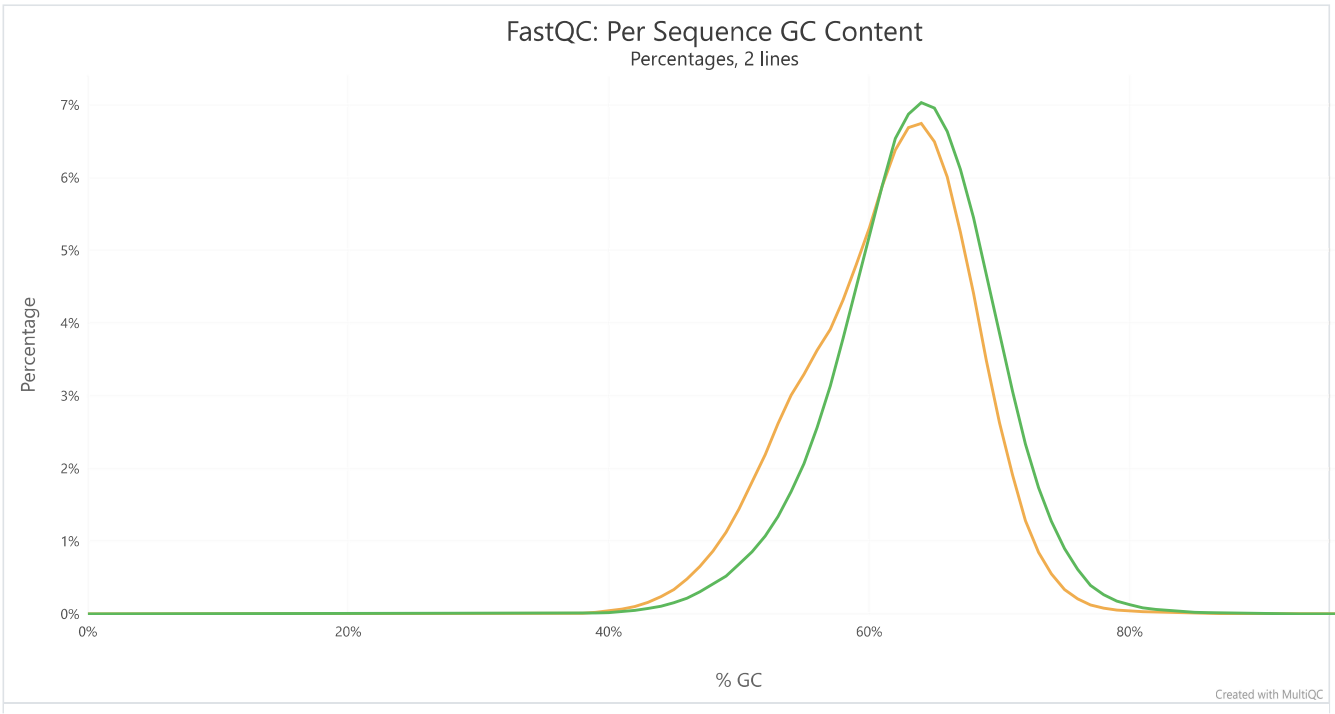

Position: - %T: - %C: - %A: - %G: -

Per Sequence GC Content

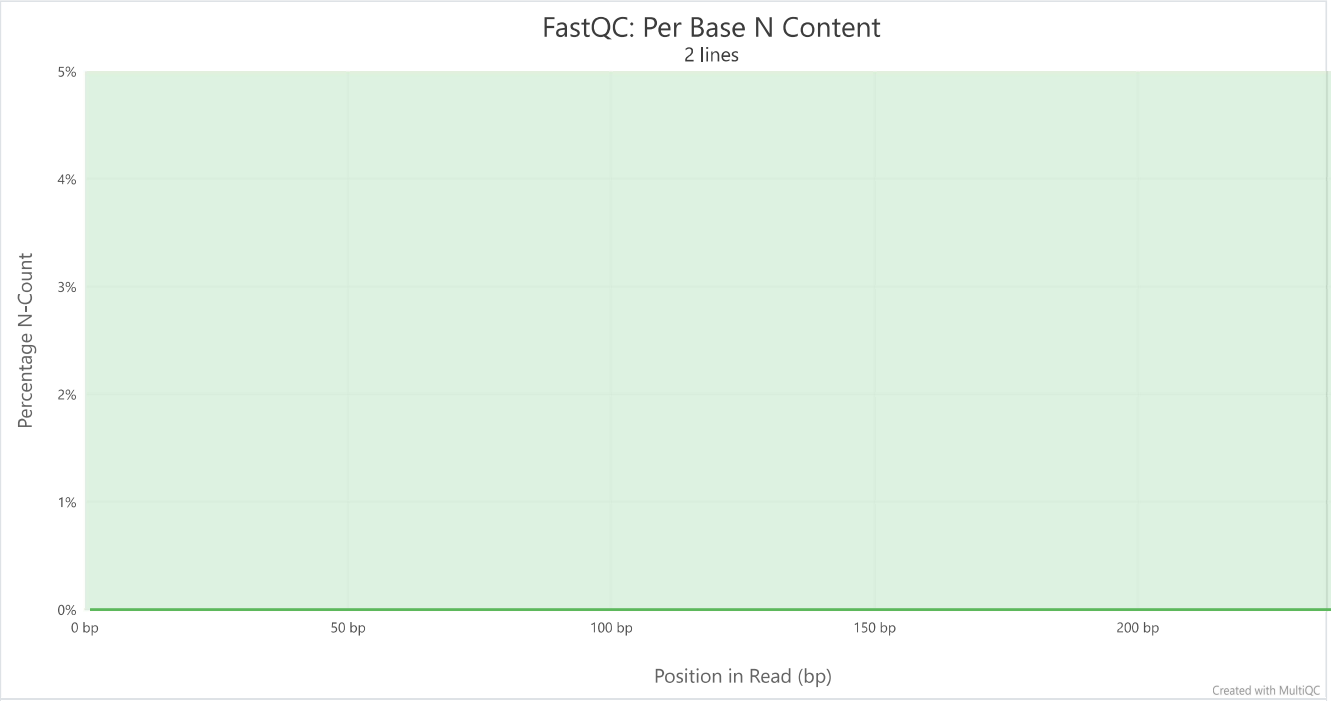

1 1

The average GC content of reads. Normal random library typically have a roughly normal distribution of GC content.

Per Base N Content

The percentage of base calls at each position for which an N was called.

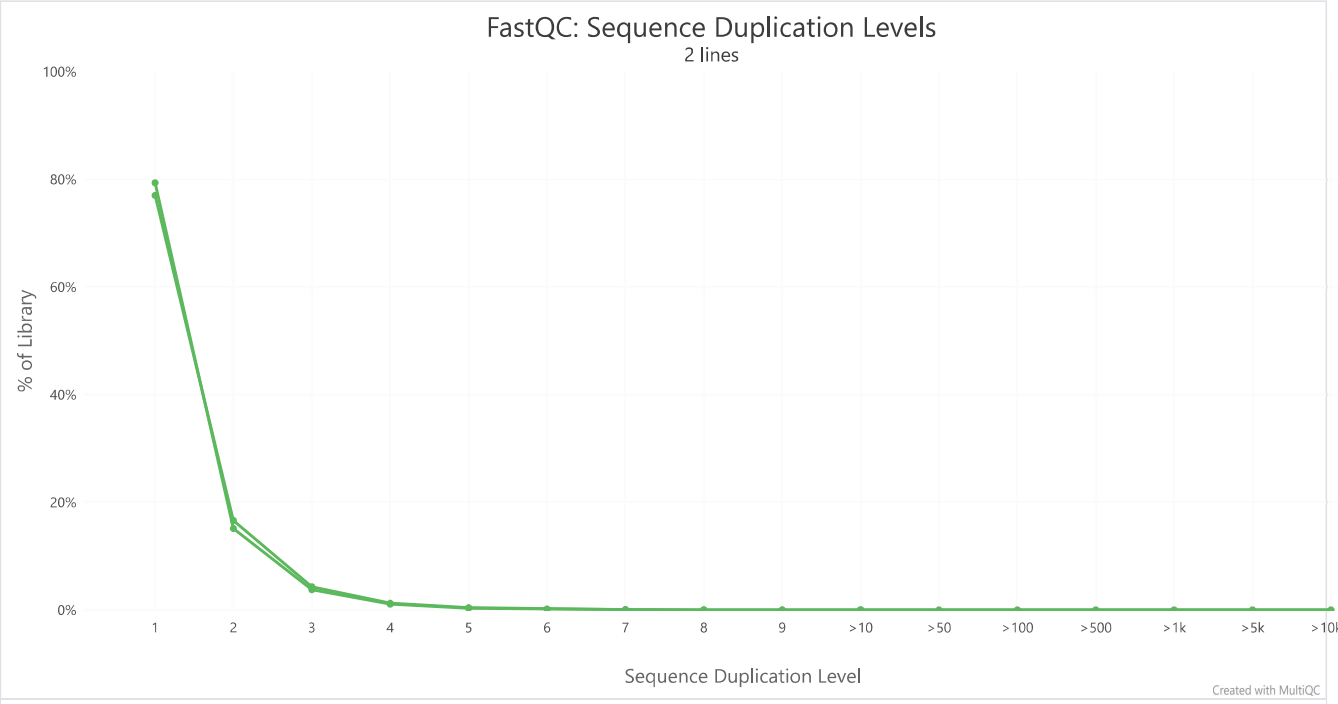

Sequence Length Distribution

All samples have sequences of a single length (251bp)

Sequence Duplication Levels

The relative level of duplication found for every sequence.

Overrepresented sequences by sample

The total amount of overrepresented sequences found in each library.

2 samples had less than 1% of reads made up of overrepresented sequences.

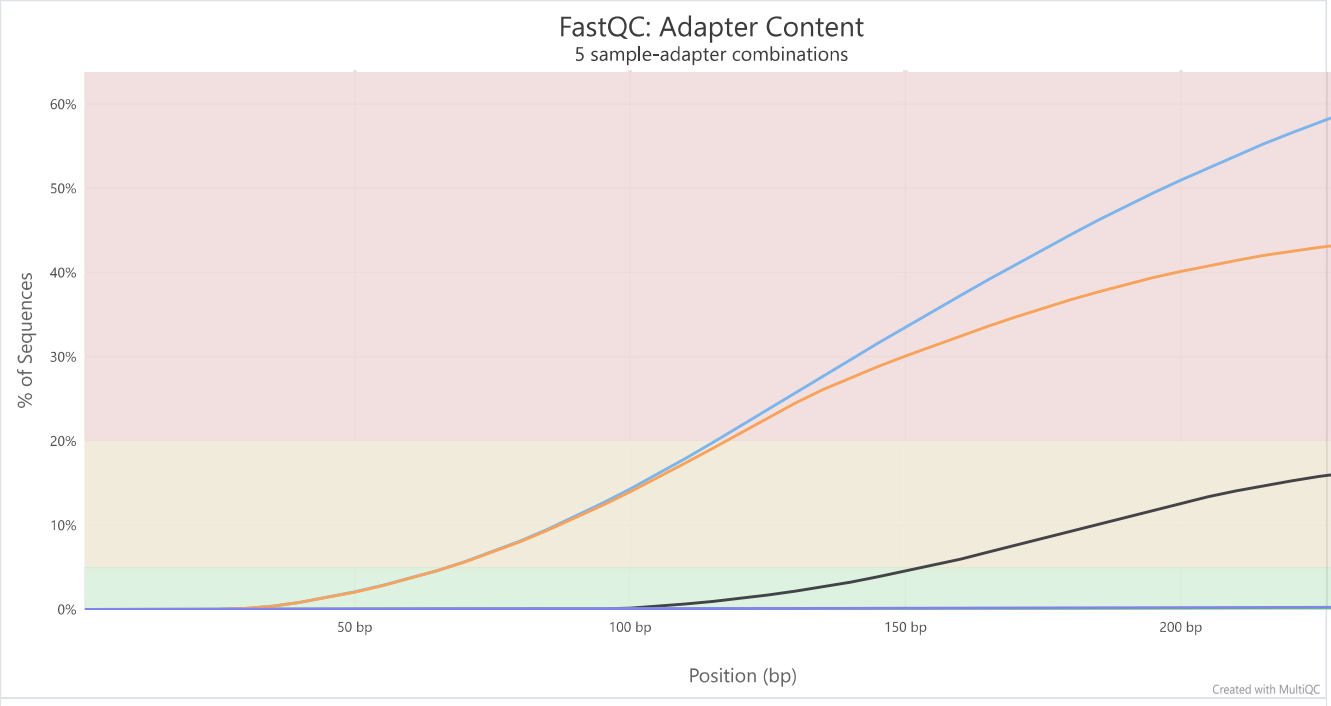

▶ Affected samples (2)

Adapter Content

The cumulative percentage count of the proportion of your library which has seen each of the adapter sequences at each position.

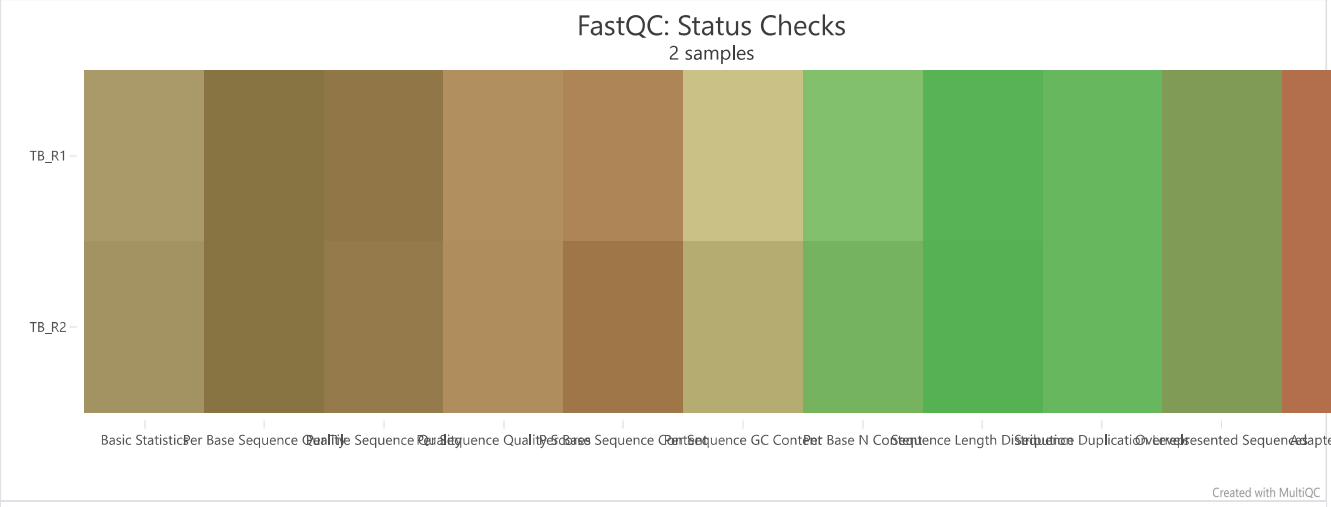

7 sample-adapter combinations with less than 0.1% adapter contamination hidden from this plot across 2 samples.

▶ Affected samples (2)

Status Checks

Status for each FastQC section showing whether results seem entirely normal (green), slightly abnormal (orange) or very unusual (red).

Software Versions

Software Versions lists versions of software tools extracted from file contents.

Software	Version
FastQC	0.12.1

MultiQC v1.35 - Written by Phil Ewels, available on GitHub.
This report uses Plotly, jQuery, jQuery UI, Bootstrap and FileSaver.js.
